Cookies

A "layered" revision

annevk · 2024-11

A more significant revision is in order

Provide the infrastructure for "third-party" cookie deprecation

Remove all the HTML Standard details as they
have no place in the network layer

Define the finer details of the Cookie Store API

Finally define the underpinnings of the
Storage Access API

And tackle Fetch, document.cookie, and Service Workers while there

Fun, no?

Thank you!
